

Actions Guidelines

Documentation of UI Triggers & Interaction Patterns

| 02 Actions

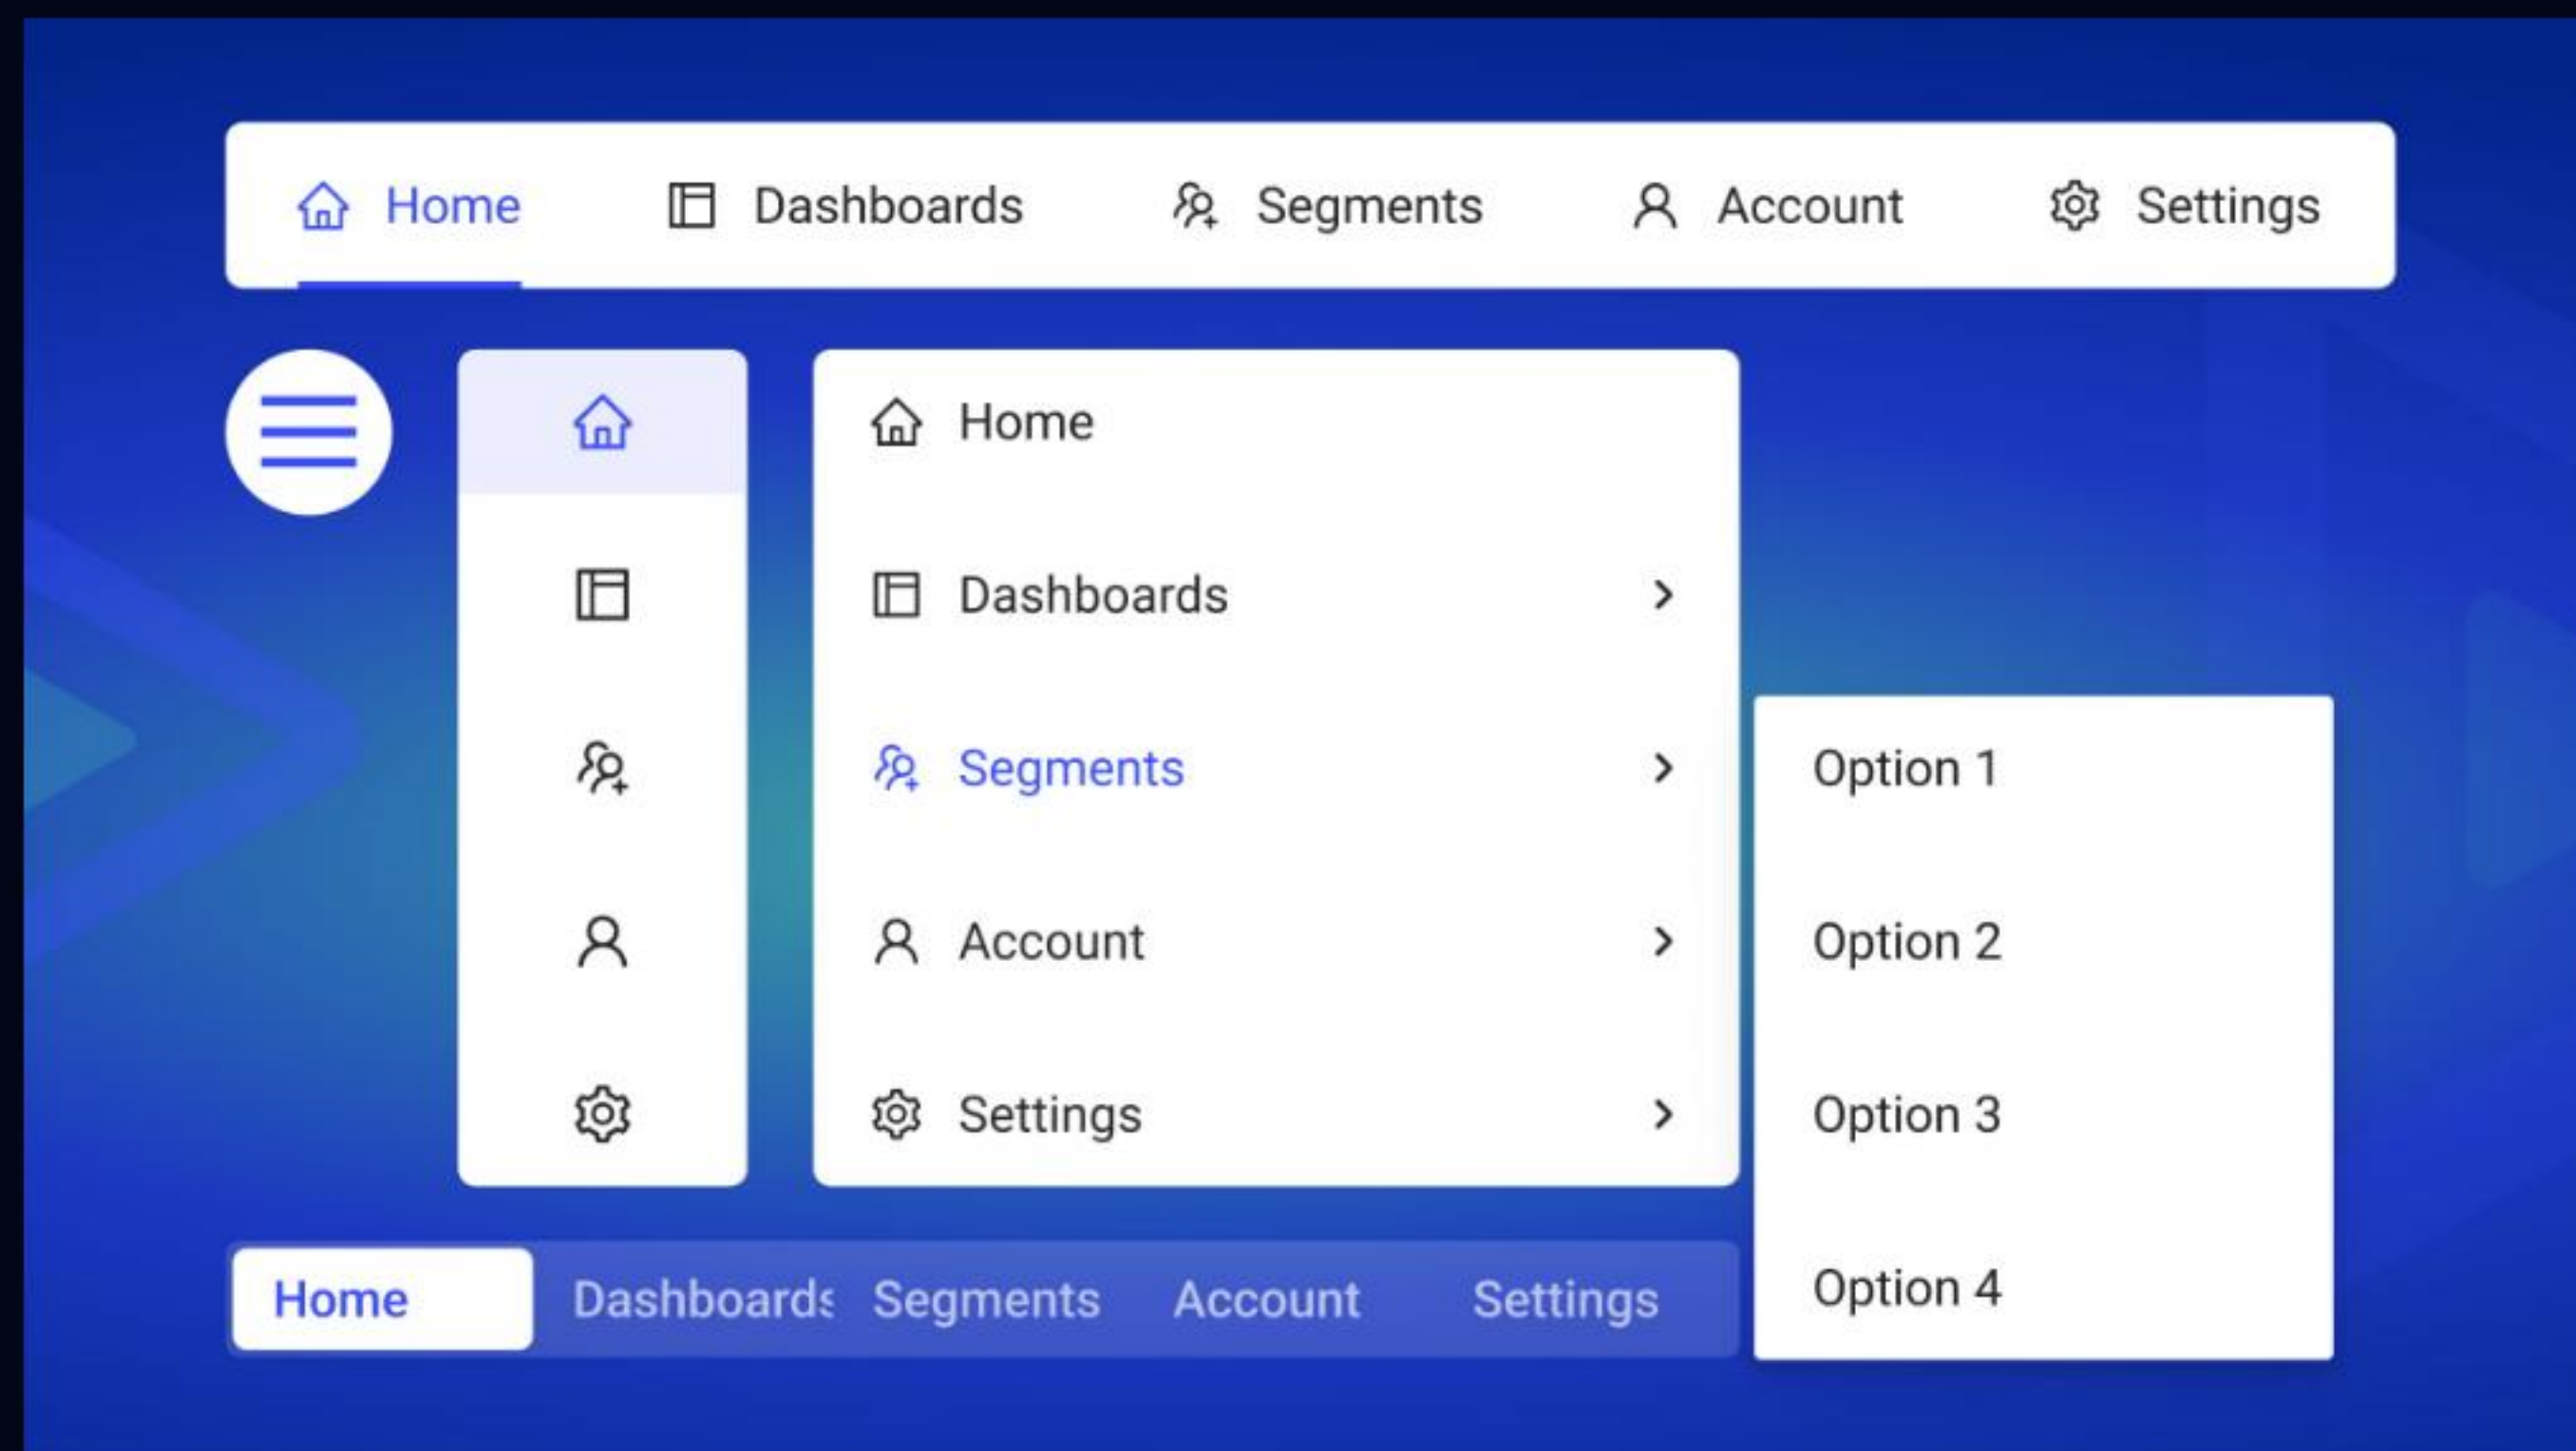

Defining Intent

Actions are the primary drivers of user interaction. They represent a clear intent to change the system state, navigate, or confirm a decision.

- ✓ **Primary:** High-priority tasks (Save, Send).
- **Secondary:** Supportive tasks (Cancel, Edit).
- 👻 **Tertiary:** Low-emphasis links or resets.

Abstract interaction flow

03 Navigation actions

Movement Triggers

Navigation actions facilitate movement between views, pages, or external resources. Unlike command actions, they do not change backend data.

Global Nav: Persistent top-level links.

Breadcrumbs: Contextual path tracking.

Deep Links: Contextual jumps within text blocks.

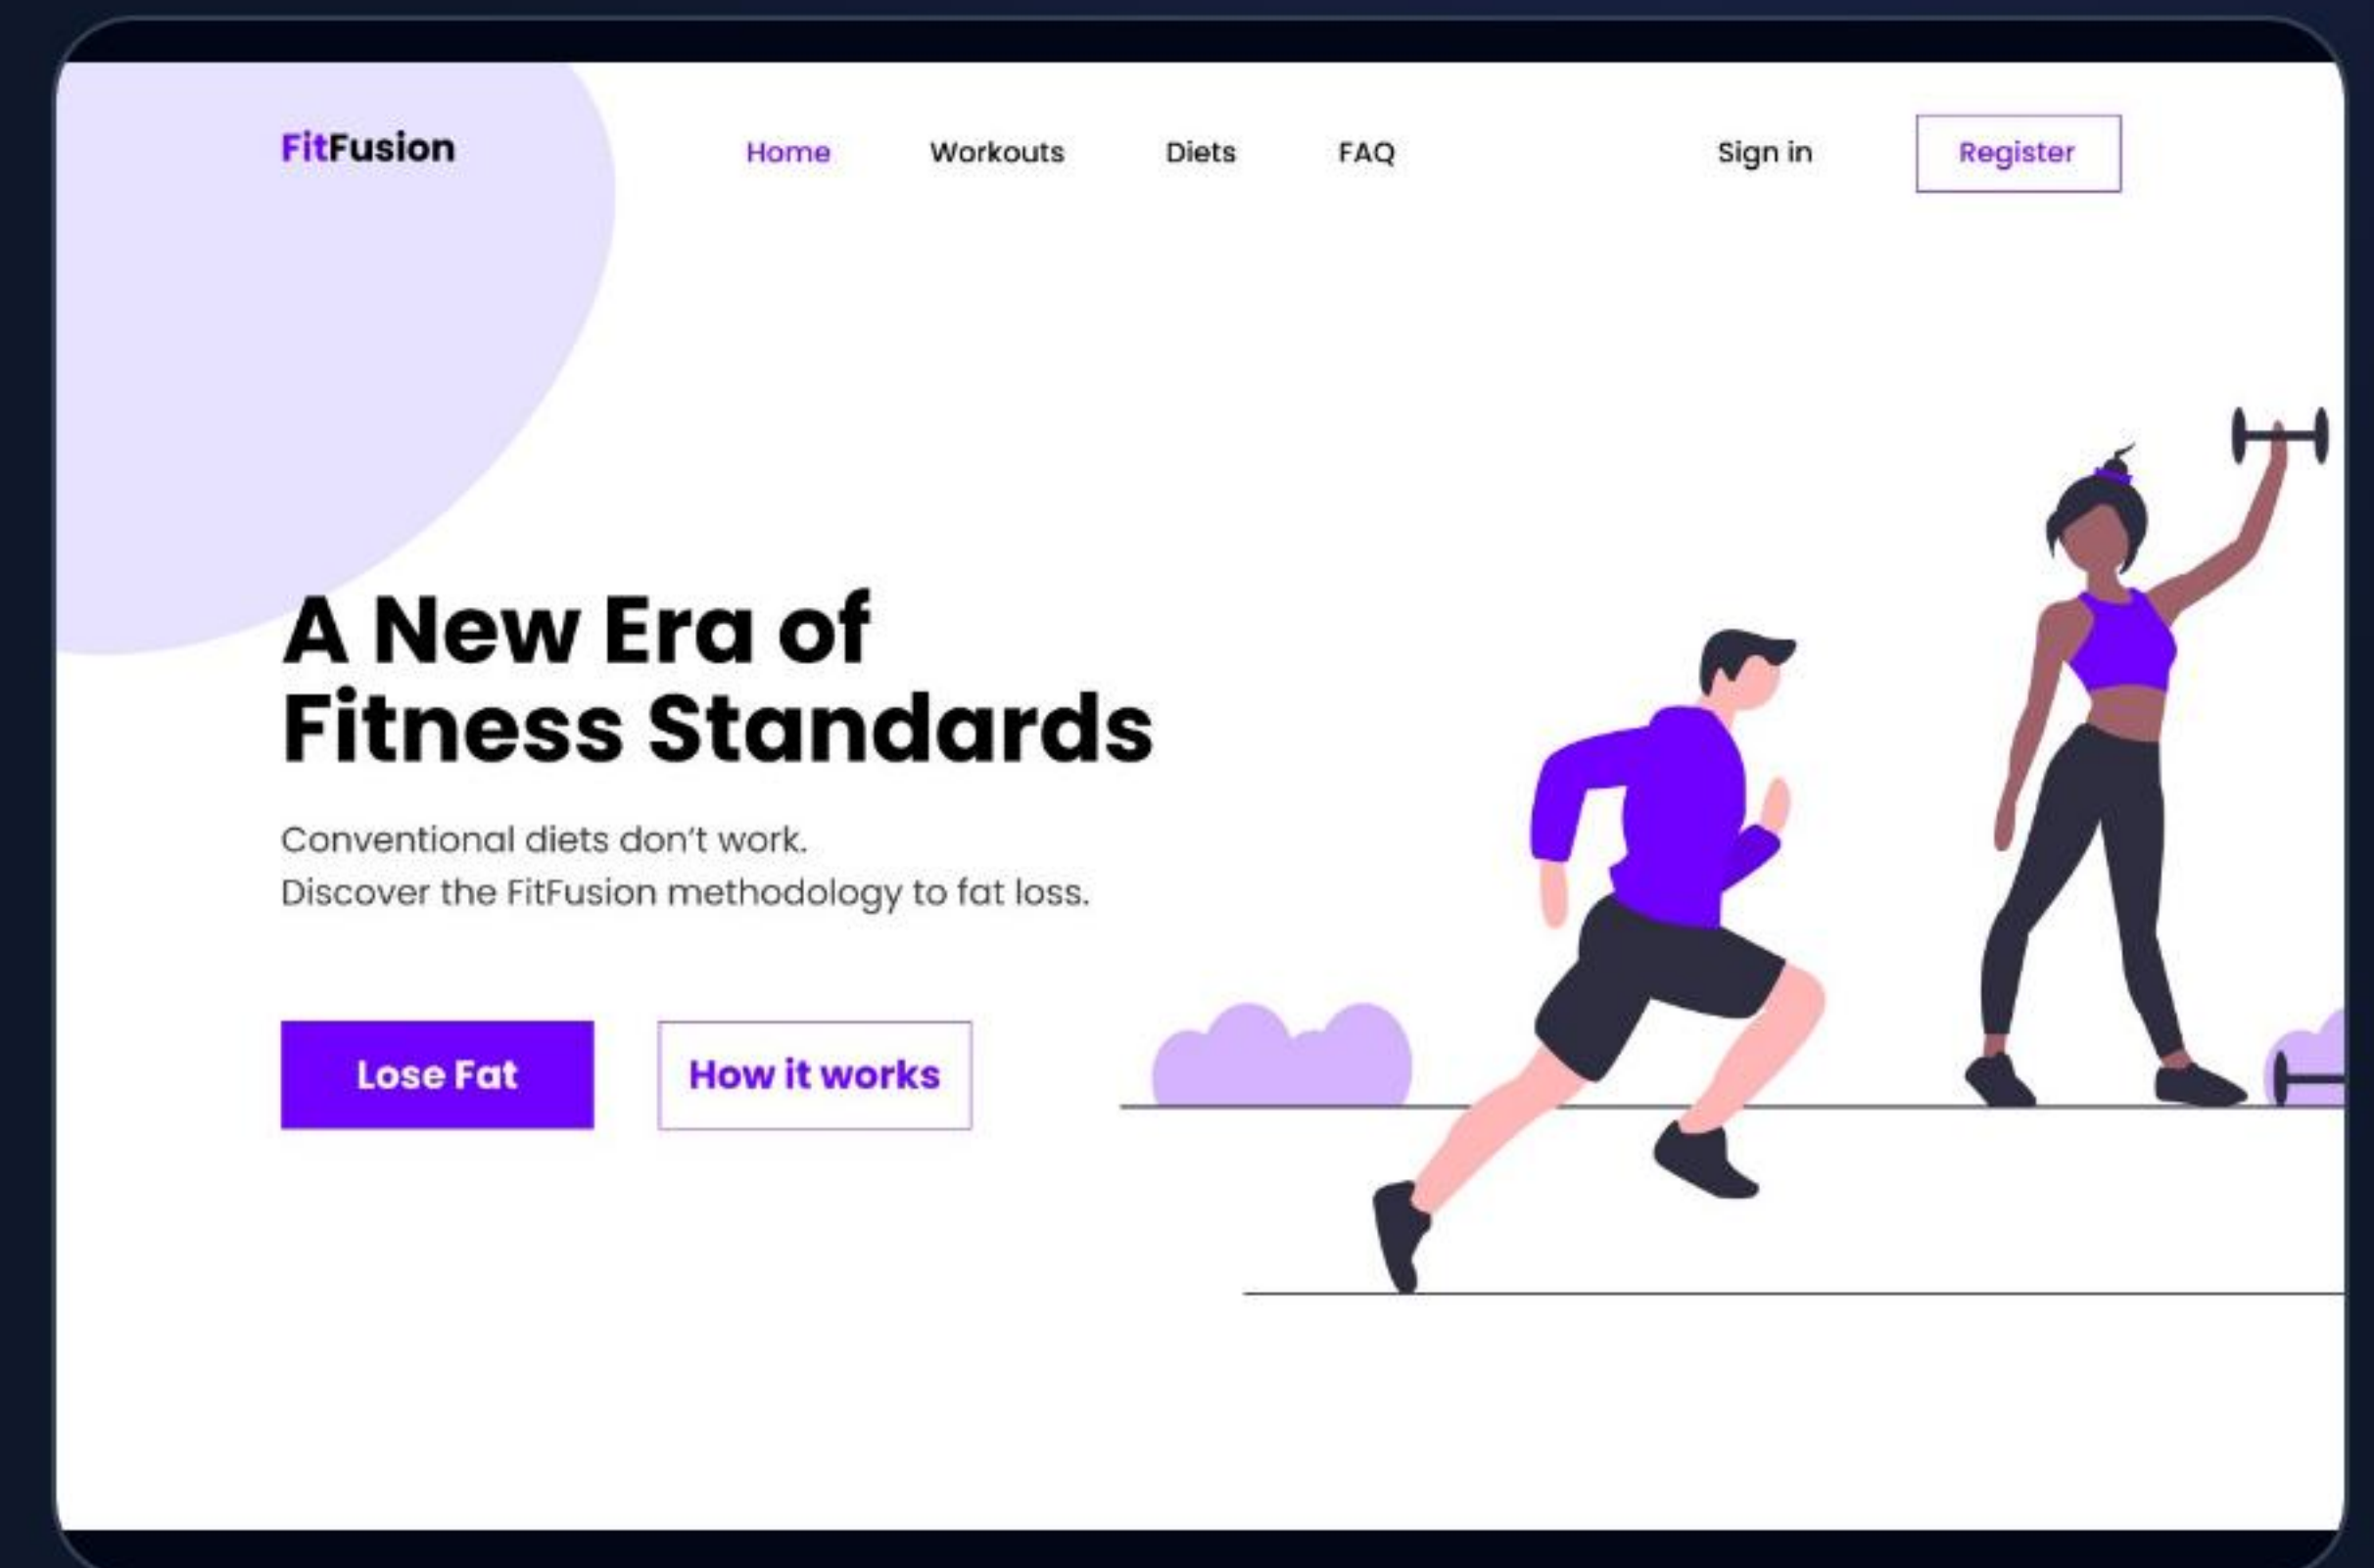

| 04 Page actions

Contextual CTAs

Page-level actions are typically located in the header or at the bottom of a container. They affect the entire content of the current view.

Primary Placement

Always align the primary page action to the top-right (on desktop) or bottom-fixed (on mobile) for maximum visibility.

| 05 Popups actions

Context Menus

Specific actions revealed upon right-click or overflow triggers. Best for expert-user shortcuts.

Tooltips

Informational triggers that provide clarity on hover. Minimal actionability recommended.

Popovers

Rich content overlays that can host multiple sub-actions or configuration settings.

| 06 Modal actions

Commitment & Finality

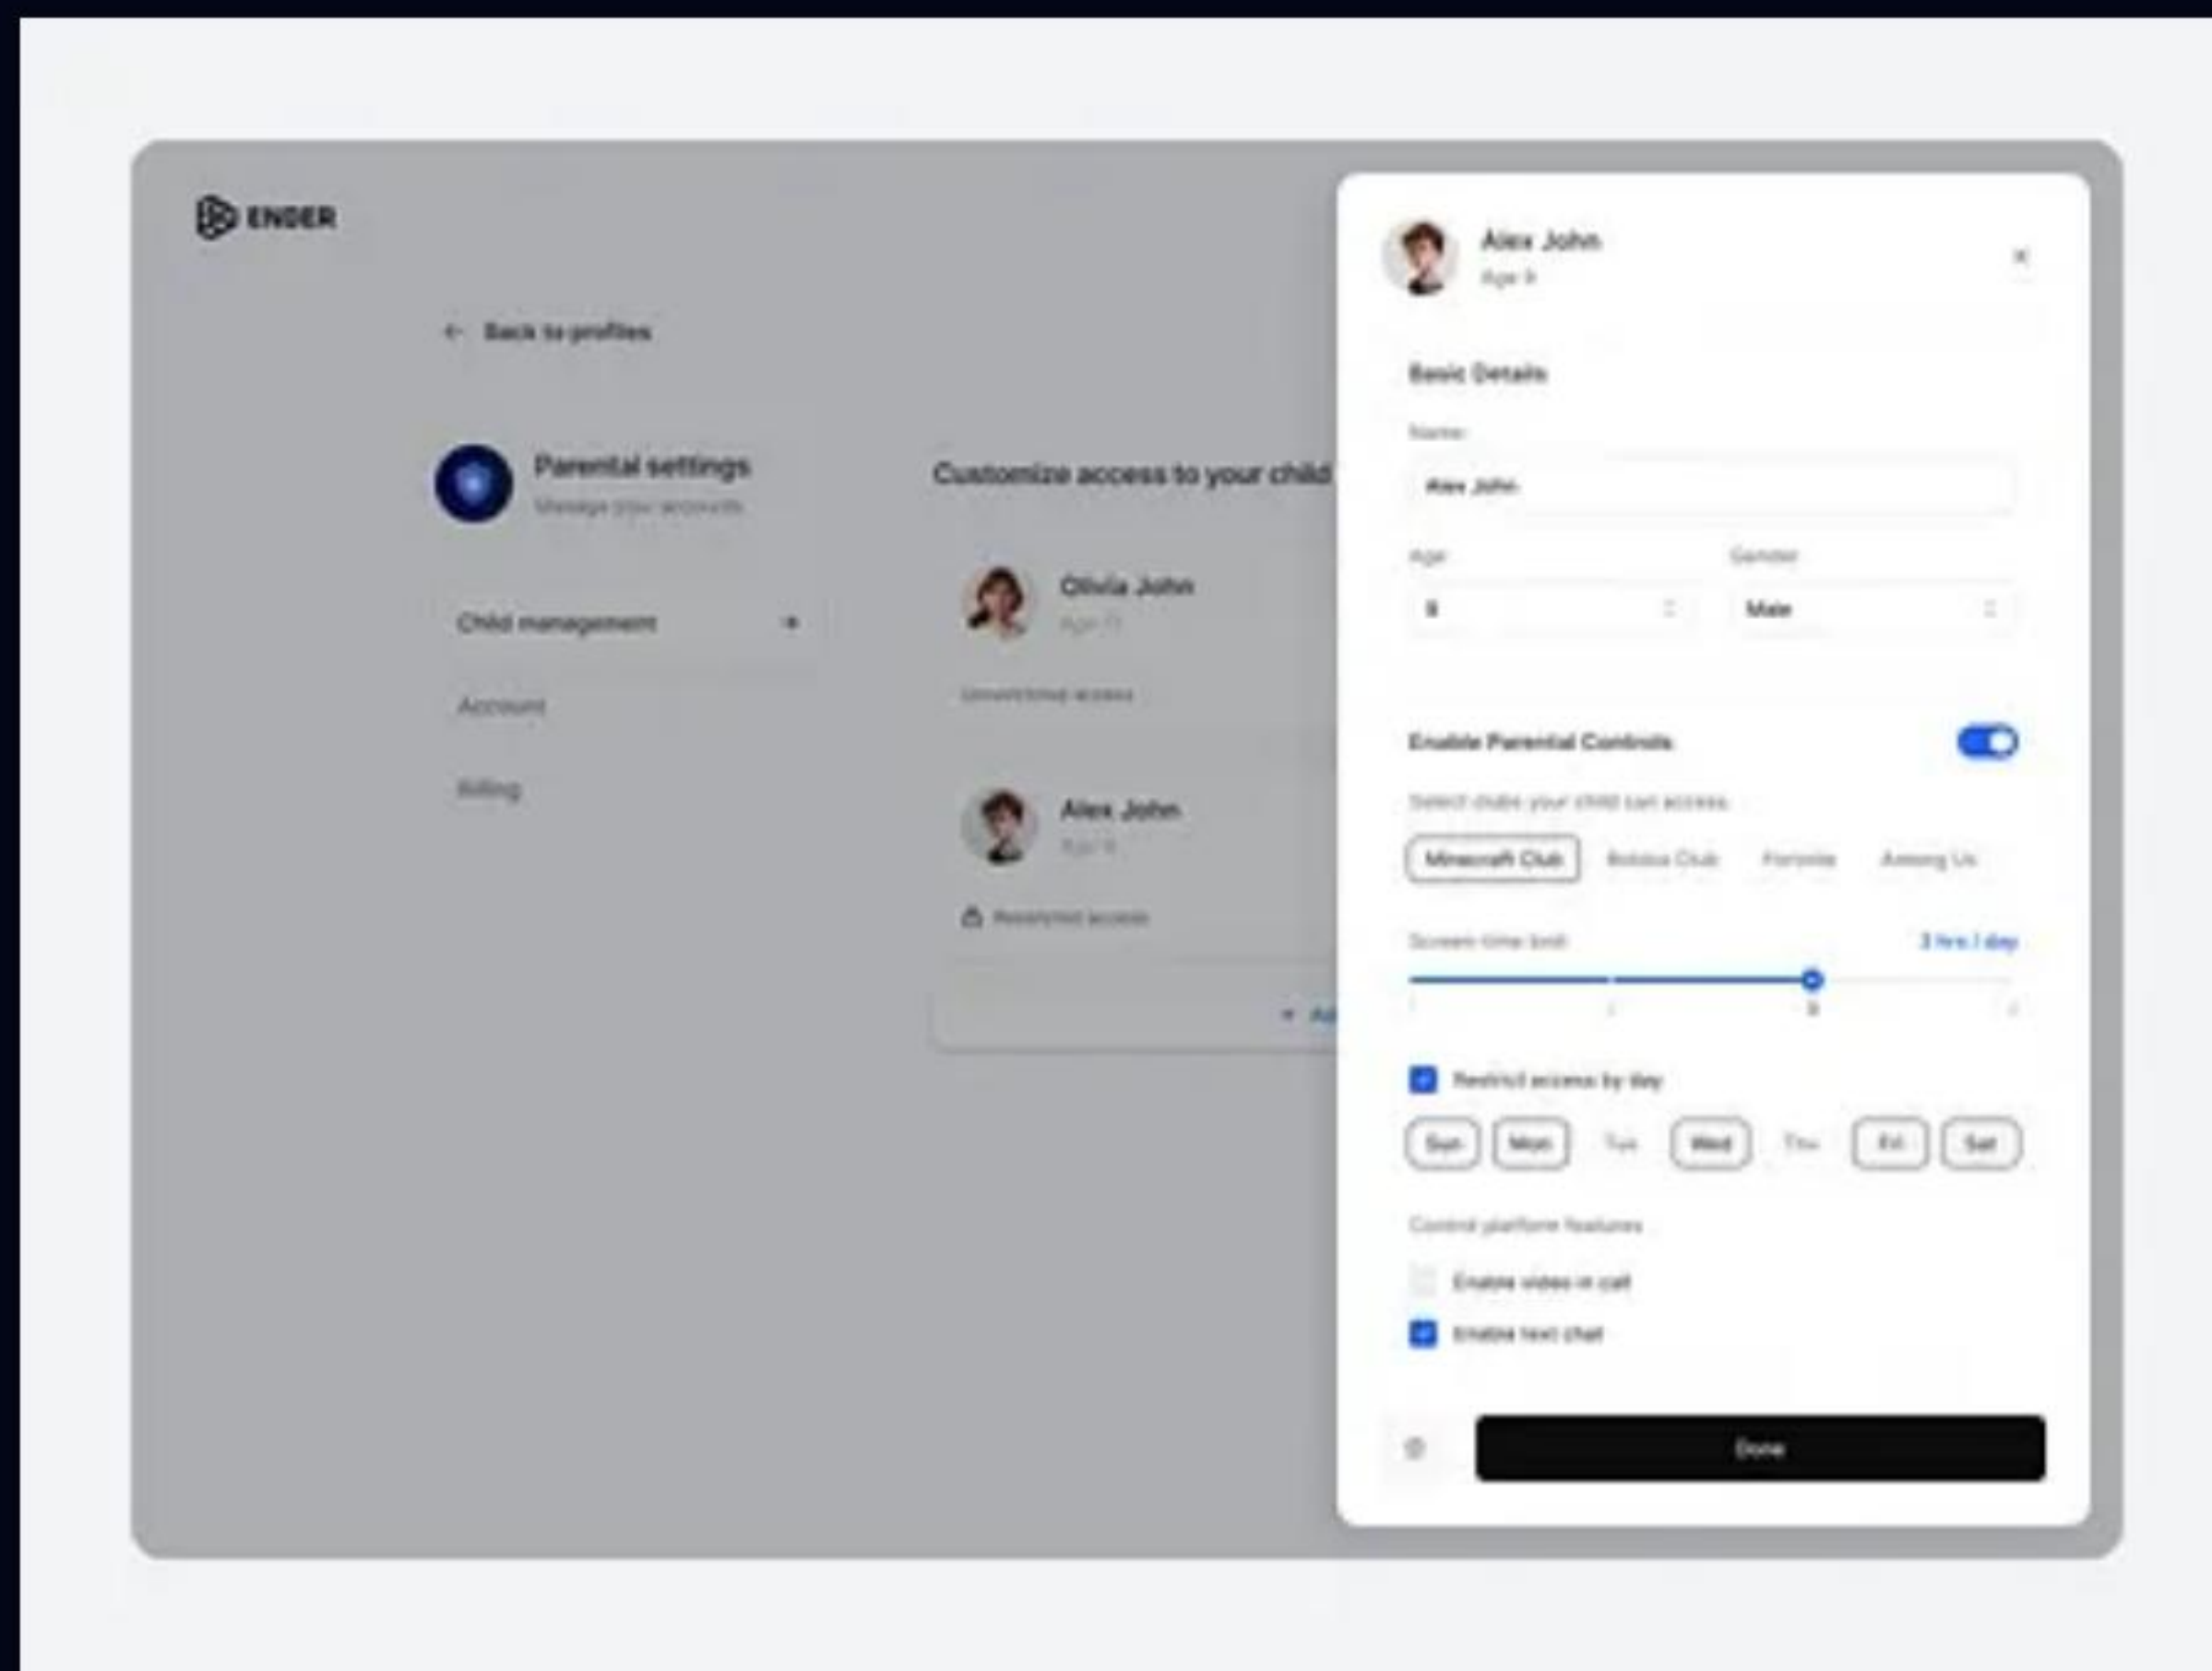

Modals create a "focus trap" for critical decision-making. Actions here must be explicit and clearly weighted.

Confirm: Primary brand color.

Cancel: Neutral ghost button.

Destructive: Red accent (e.g. Delete).

| 07 Sidepanel actions

Configuration Flow

Sidepanels (drawers) are ideal for complex configuration or filtering tasks that shouldn't obscure the main view entirely.

Apply/Submit: Found at the footer.

Close/Dismiss: Top-right 'X' icon.

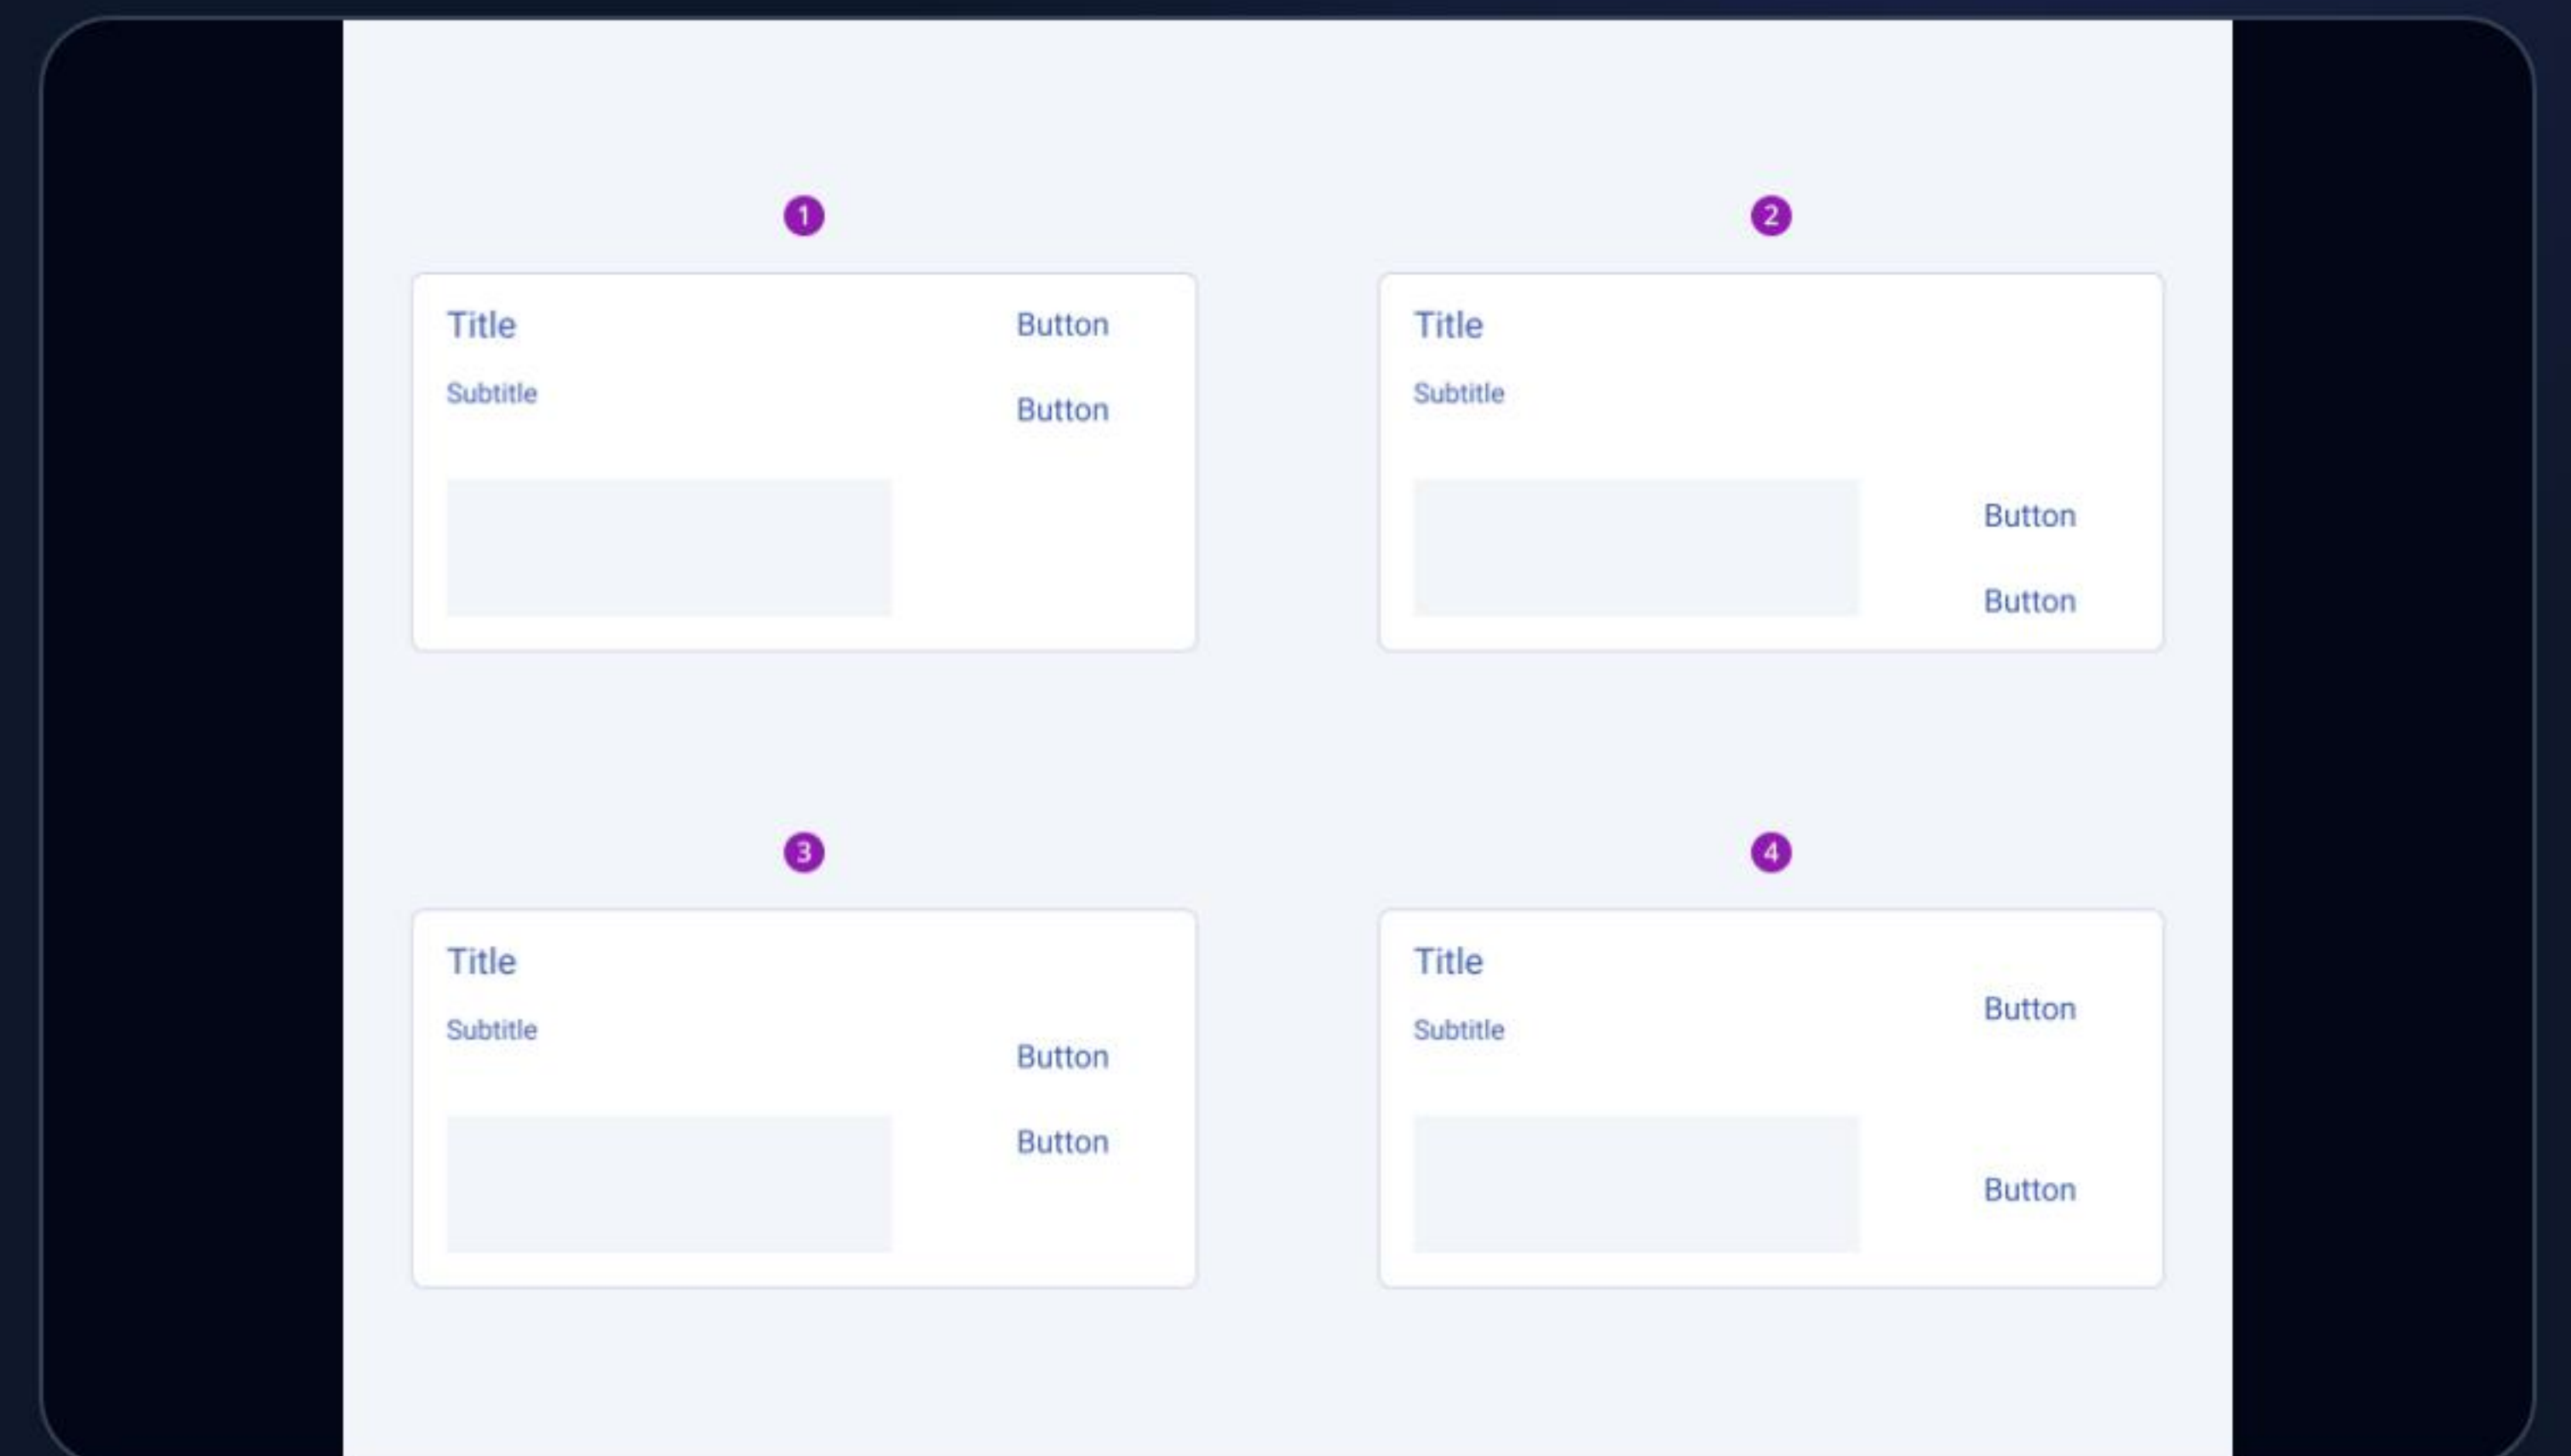

Reset: Usually secondary at the top or bottom.

| 08 Actions in cards

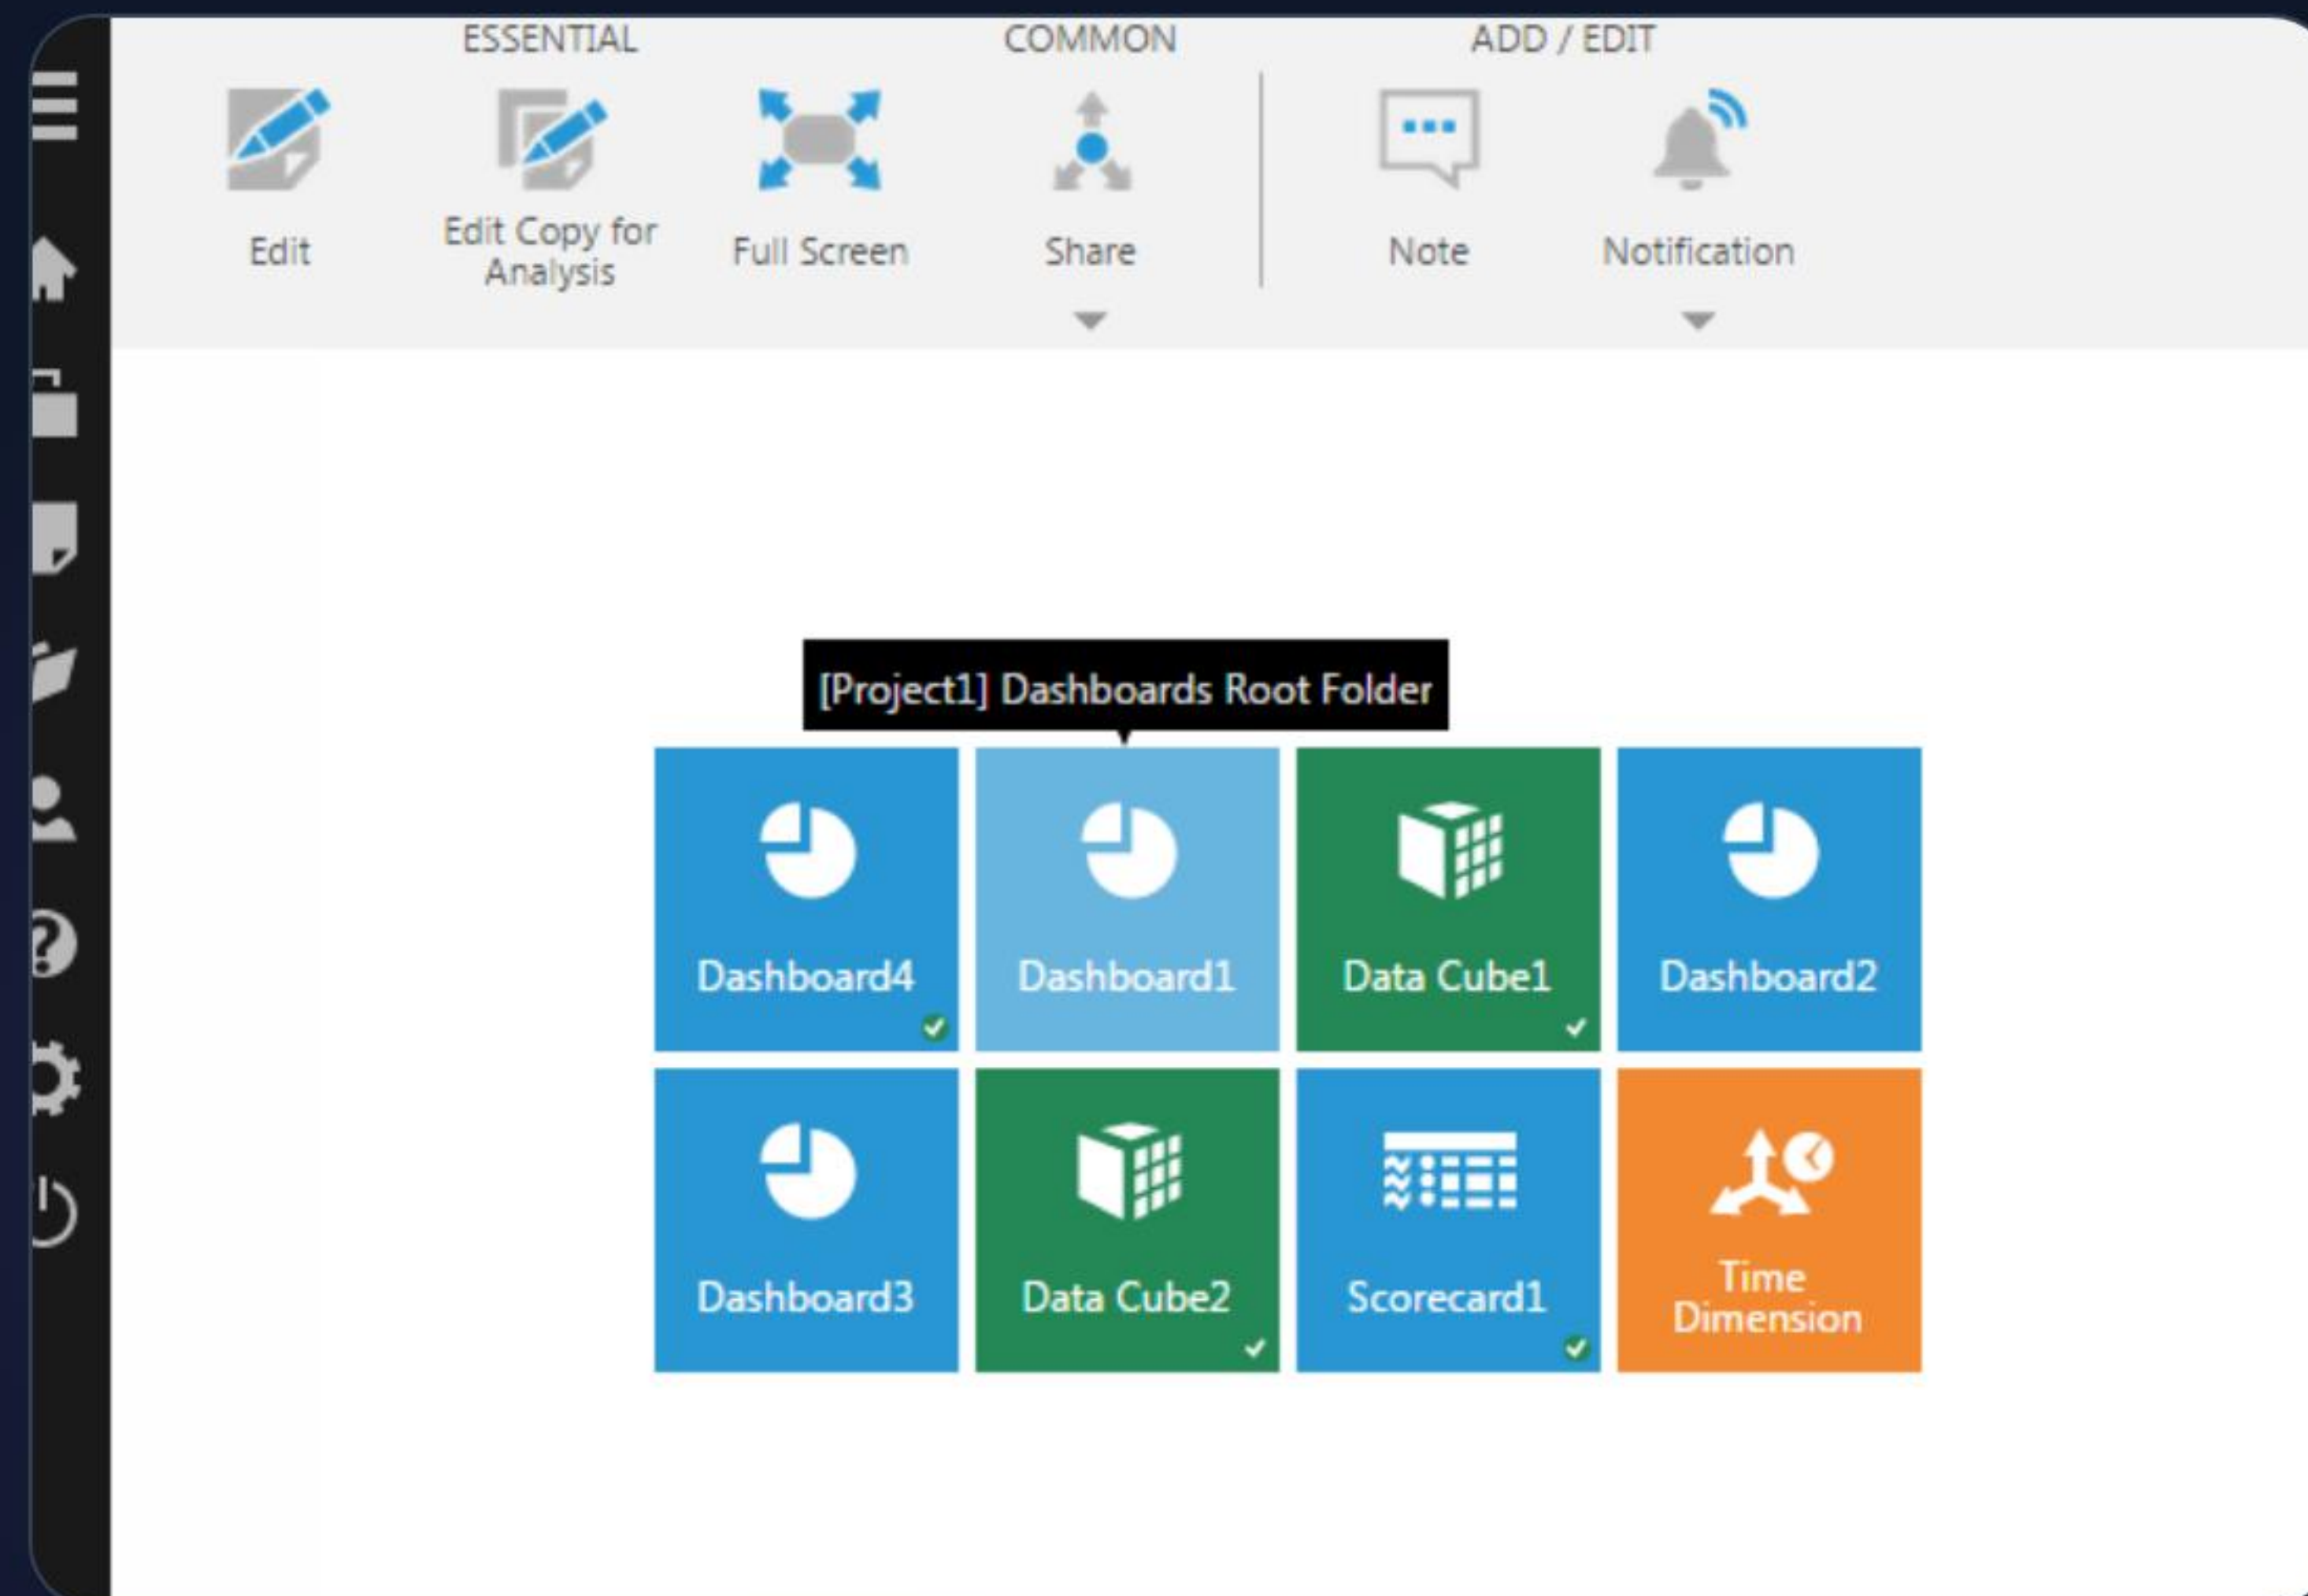

Localized Scope

Actions placed within cards only affect that specific data entity. This limits cognitive load and makes bulk actions more intuitive.

UX Rule: If a card has more than 3 actions, consider an overflow (kebab) menu.

09 Tile as action

Object Navigation

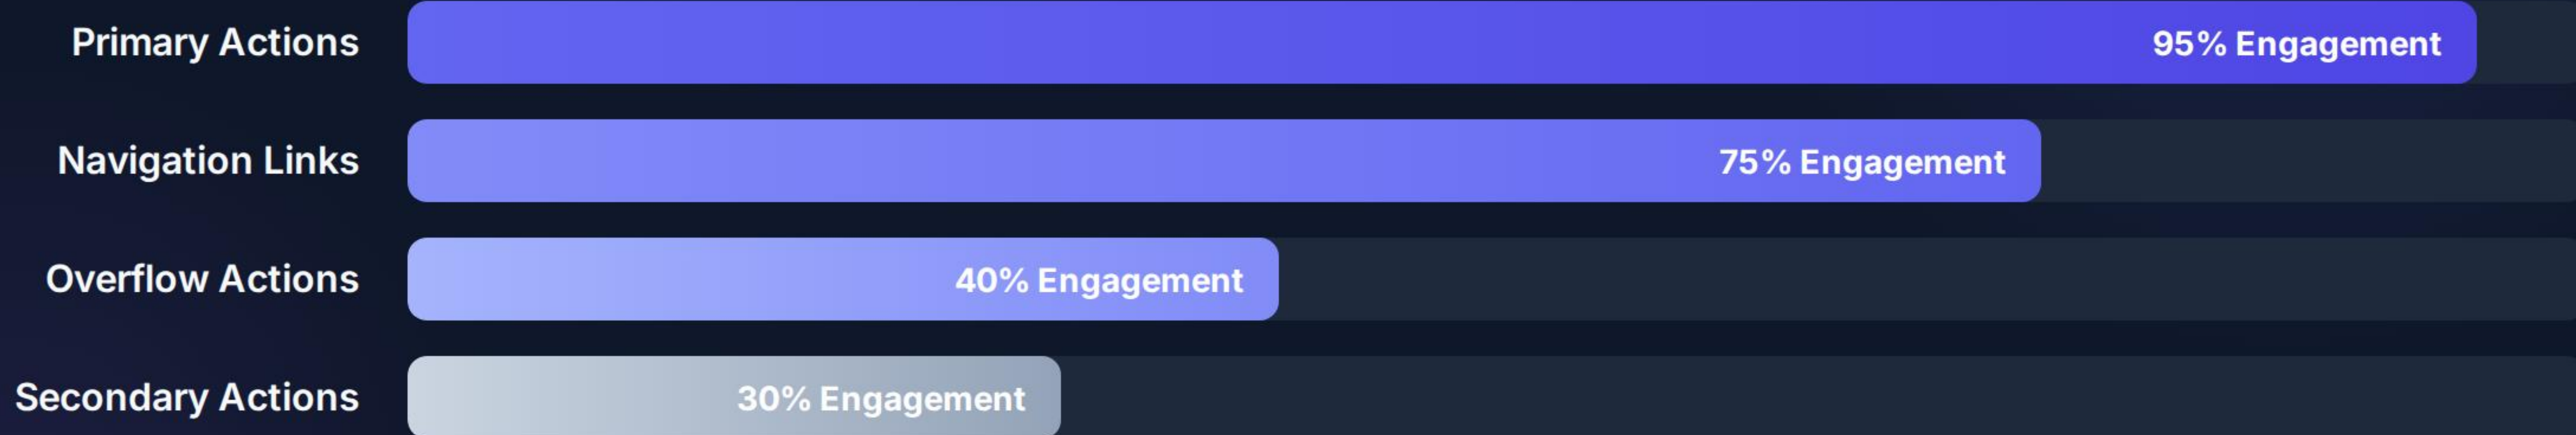

Tiles function as large targets for choosing objects or navigating categories. The entire container becomes an interactive trigger.

Visual Cues: Subtle hover elevations.

Focus States: Border glow on tab.

Selection: Use badges for multi-select.

| Action Importance Weighting

Primary CTAs drive the vast majority of conversions. Maintain high visual hierarchy for critical task triggers.

Visual State Standards

State	Visual Treatment	User Perception
Default	Solid/Outline Color	Interactive Object
Hover	Brightness Shift (+10%)	Ready for Action
Pressed	Brightness Shift (-10%)	Action Acknowledged
Disabled	Greyscale / 40% Opacity	Non-interactive

Questions?

Thank you for your attention.
